reliving those days at techtu ...

Steve: Leo Laporte?

Steve: Leo, if it helps, we all think that you're full of yourself. But how did you end up in deep space?

Leo: Who dat? Who dere?

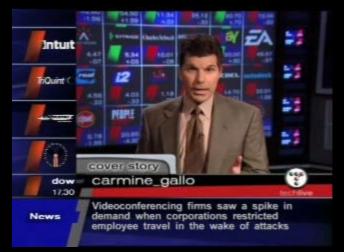

Leo: I'm alive? Wait ... it was full ... of ... me! What ... happened?

Leo: Purple ... outfit ... 50 pounds ... lighter? What ... year ... is ... this?

Steve: It's 2001, Leo. You know that.

Carmine: Captain, our sensors indicate that Leo's gone through some sort of rift in time. This is an abnormality caused by a security hole in Microsoft Windows 98SE.

Steve: Ah, put our faith in Microsoft! So Leo, what year do you think it is?

Leo: Say ... what?

Steve: Damn that SE!

Carmine: Indeed, sir. All indications are that the rift, all security holes that can breach the time-space continuum will be fixed by the up-comming release of Microsoft Windows XP.

Leo: 2004 ... if it ... isn't? 2004? Then . . .

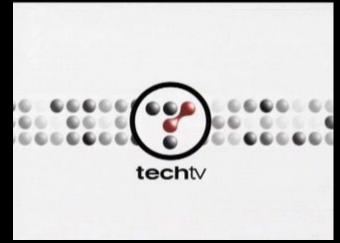

Steve: Wait, you say this network is actually still around in 2004?

Leo: Barely ... just barely, it's about to be taken over by ... oh dear god. No! The horror! The horror!

Carmine: Fascinating.

More Fun in the PAST!
